

WINDOW AND DOOR PROTECTION

The ACC has approved the installation of window and door protection from extreme weather events.

Property Owners or their designee may install storm shutters or other solid protection material only when an emergency weather condition has been declared. Emergency conditions are declared by the Beaufort County Emergency Operations Center.

The type of window or door protection shall be the discretion of the Property Owner. Permanently attached shutters must have prior approval from the ACC. Taping of windows or doors is not an approved method for protection. Storm shutters or other solid material should be installed if a Voluntary Evacuation or Mandatory Evacuation has been declared. If the area is not impacted by the weather event the shutters or solid material should be removed as soon as possible.
